Eric

You would have received the memo from TCEQ. Please note Lam's points in the email below.

Thanks.

Raji Josiam

Remedial Project Manager

US EPA Region 6

Raji,

The PRP made a request to discharge the water from the pond and now the TCEQ Water Quality Division issued the recommendation.

1. Based on the recommendation, the PRP must take more samples at a lower detection limit of 0.1µg/L for Guthion and Malathion and of 20µg/L for total cyanide.
2. The bacteria (Enterococci) sampled were much higher than the discharge requirement and therefore must be treated prior discharge into Vince Bayou. However, the bacteria discharge requirement is based on a continual discharge and not based on a one-time discharge. I suggest that you ask Eric to clarify it against the TPDES guidance to make correction.

I'll be out tomorrow and be back next Wednesday.

The memo has been sent to Eric.

Lam,

Here is our memo. I put the hard copy in the inter-agency mail. Please let me know if you have questions.

Regards,

Satya
